<!ELEMENT attachment EMPTY>
<!ATTLIST attachment
    encoding    (mime|binhex) "mime"
    file        CDATA       #REQUIRED>
```

We go through some interesting parts of this DTD:

- A head element contains a from element, at least one to element, zero or more cc elements, and a subject element, in that order.

- In from, to, and cc elements the name attribute is not required; the address attribute, on the other hand, is always required.

- A body element contains a text element, possibly followed by a number of attachment elements.

- The encoding attribute of an attachment element must have either the value
